AGREEMENT

on scientific and technological co-operation between:

I. Institute of Experimental Physics of the Gdansk University (Postal address: 57 Wita Stwosza Str., 80-952 Gdansk, POLAND)

and

II. Department of Physics of the Lviv Ivan Franko State University (Postal address: 50 Dragomanov Str., 290005 Lviv, UKRAINE).

Institute of Experimental Physics of the Gdansk University and Department of Physics of the Lviv Ivan Franko State University have come to an agreement on the possibility of the scientific and technological collaboration in the field of fabrication and characterization of novel materials for optoelectronics. Taking into account their experience in researches on experimental and theoretical problems in the solid state physics and materials science both parties come to agreement that consist of:

1. The collaboration and joint research will concern fabrication and characterization of new materials for optoelectronics. Especially both parties develop and apply modern experimental technics based on optical, photoacoustic and electron paramagnetic resonance spectroscopy for investigation of fundamental properties of luminescence centers in solid materials, and develop theoretical approaches based on semiempirical and first principle quantum mechanical models describing the energetic structure of localized centers and radiative and nonradiative processes in the solid state.
2. Both parties will formulate the joint research projects which concern particular topics and problems which are in common interests.
3. All results obtained in the frame of this agreement will be published in common.

4. Both parties will try to exchange the researchers and arrange short visits in the both institutions.
5. The agreement period is 5 year starting from 1998. The program of co-operation for each year will be fixed successively and attached to this general agreement as appendices.
6. Financing of research is made by each of the parties depending on the financial resources of each party. Financing of certain projects is made in the frame of additional agreement. All financial question concerning this cooperation will be considered as the need arises. To get additional funding both parties will try to apply for the grants to the national and international institutions.
